The dominant bull calf of the 2005 SydGen calf crop, Bullet was the top weaning natural calf, easily the top-gaining bull calf up to sale time in November and went on to become the highest yearling weight bull of the entire sale offering at 1474 lbs. to ratio 118. He recorded solid ultrasound data as well, recording 4.02 %IMF to ratio 104 and a 14.5 inch REA to ratio 109. Named for the Bullet Rotor technology in the new John Deere STS Combines that increase efficiency and capacity while maintaining durability, Bullet is as structurally correct, massive, and complete as any bull we have worked with. His dam stems from a GDAR base, has maintained a 366-day calving interval, and displays excellent volume and fleshing ability. Owned with TK Angus, Gordon, NE, Bullet will see extensive use in both programs this spring. He is currently housed at ORigen, and will have semen available at \$20 per unit.
