

Adaptability...

For 57 years, the Sydenstricker family has been actively involved in the production of breed-leading Angus genetics. Our "name change" from Sydenstricker Angus Farms (SAF) to Sydenstricker Genetics (SydGen) in 2001 confirms our commitment to providing the best genetics possible to the beef industry. Surviving the tough times, and enjoying the good times, this program is large enough to offer you outstanding selection, small enough to care about your success, progressive enough to stay on the cutting edge, and independent enough to do things our own way.

Generations of selection pressure coupled with the challenges of the Missouri environment allow us to offer you adaptable cattle with bred-in superiority for many traits. We produce over 800 calves per year, with as much diversity of bloodlines as you will find in any one program.

Our cattle are developed in a practical manner. Herd sires and donors have to work in the real world, and that world contains a lot of fescue, ice, mud, and dust, depending on the season. They are developed in large contemporary groups, with selection based on multi-trait superiority, including soundness, longevity, fertility, udder quality, growth, calving ease, docility and carcass merit.

Adaptability of the program is also important. We have witnessed dramatic changes at various times throughout these 57 years, and have always used common sense along with the best current technology to work our way through it. This current challenge will be no different.

Our strength, and yours, is that the Angus breed has no peer in commercial beef cattle production. The recent bull sale season confirms the confidence of the commercial world. Our status there is paramount to the strength of the Angus breed, and we must continue to protect it.

1997 Certified Angus Beef "Commitment to Excellence" Seedstock Producer of the Year

2001 Beef Improvement Federation Seedstock Producer of the Year

Make plans now to join us on November 21, 2009 for our 31st Annual Production Sale.
